Los Angeles, California 90049

Subject: Phase II Site Investigation Report, 119 S. Arrowhead Avenue, San Bernardino, California

Dear Mr. Enghard:

This Phase II Site Investigation Report has been prepared by Hazard Management Consulting, Inc. (HMC) for the property located at 119 S. Arrowhead Avenue (the Site, Plate 1) in San Bernardino, California. It is our understanding that you are considering acquiring the Site for development of a three-building industrial development. The Site is currently a vacant dirt parcel but was historically the location of a foundry. HMC previously prepared a Phase One ESA for the Site as part of your due diligence activities and reported on previous historic investigations at the Site which documented the presence of elevated concentrations of metals, volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), and total petroleum hydrocarbons (TPH) in shallow soil. HMC recommended additional shallow soil and soil gas sampling to assess issues that could arise as part of your developmental efforts.

The Site was investigated under the oversight of the California Department of Toxic Substance Control (DTSC) who issued a No Further Action Letter dated February 28, 2007. The NFA letter stated that the Site “does not appear to pose a threat to human health or the environment with present use of the site” and that “no further action is necessary with respect to investigation and remediation of hazardous substances, provided that: (1) the use of the site does not change from commercial/industrial, and (2) the site is not used for any of the sensitive uses identified in the Land Use Covenant.” The Land Use Covenant (LUC) also requires DTSC be notified prior to any subsurface work and such work is subject to a Soil Management Plan (SMP). It is our understanding that your plans for the Site would not require a change in land use from those approved above. However, as part of your development, the Site will be graded following the protocols of that SMP. Given the concentrations of residuals remaining at the Site, the potential exists that some of the shallow soil that is disturbed during grading would require off-site disposal as part of the SMP. In addition, given your plans for the construction of buildings on the Site, knowing the current concentrations of VOCs

in shallow soil gas is important in order to assess whether vapor mitigation systems may be necessary.

This report details the shallow soil and soil vapor investigation completed to verify historical soil impacts and quantify potential vapor intrusion and risks, if any, associated with the historic Site use.

FIELD ACTIVITIES

The following sections summarize the investigation activities conducted by HMC.

Pre-Field Activities

Prior to the commencement of field work, HMC notified DTSC of the upcoming subsurface work and was approved to complete the investigation at the Site under the existing SMP dated June 2018. On October 12, 2021 HMC personnel visited the Site and staked out the proposed investigation locations (Plate 1) in a grid across the Site. Following the location mark-out, HMC notified Underground Service Alert (USA) of the upcoming work at the Site, for utility clearance.

Soil Boring and Soil Vapor Probe Installation and Sampling

On October 18 and 19, 2021, thirty-one soil borings (Plate 1) were completed to a depth of 10 feet below ground surface (bgs). Soil borings were installed using a direct push drill rig by MR Drilling. During drilling, soil was collected using continuous sampling to the total depth of 10 feet bgs, soil lithology was logged, and soils were field screened for VOCs with a photoionization detector (PID). Each soil sample was logged in accordance with the Unified Soil Classification System (USCS) under the supervision of a California Professional Geologist (PG). Boring logs showing lithology are provided in Attachment A.

Four soil samples were collected at each soil boring location (124 samples in total) at depths of 1, 3, 5, and 10 feet bgs. At each location, 2 of the 4 samples collected were sent to SunStar Laboratory in Lake Forest, California, for analysis and the other 2 samples collected were placed on hold at SunStar Laboratory in case additional analyses were needed.

Soil samples within each boring were to be selected for laboratory analysis based on PID readings, or lithology, or future soil management activities at the Site. No significant PID values were detected during the investigation and clay units were not encountered during drilling (Attachment A). Therefore, analytical priority was given to the 1-foot soil samples, that would potentially require soil management during future grading activities at the Site.

Fifteen (15) of the 31 soil borings were sampled and backfilled with hydrated bentonite. The 1-foot and 3-foot soil samples at these locations were analyzed for potential soil impacts. The 1-foot

samples were analyzed for VOCs by United States Environmental Protection Agency (USEPA) Test Method 8260B, TPH using USEPA Test Method 8015M., Title 22 Metals using USEPA Test Method 6010B, PAHs using USEPA Test Method 8270C, and PCBs using USEPA Test Method 8082. The 3-foot samples were analyzed for an abbreviated suite of VOCs, TPH, and Title 22 Metals.

Sixteen (16) of the 31 soil borings were sampled and then a single, temporary, 5-foot soil vapor probe was installed to assess the potential for vapor intrusion at the Site. The 1-foot and 5-foot soil samples were analyzed at these locations, to allow for a direct comparison to be made between concentrations within the 5-foot soil samples and the 5-foot soil vapor probes. The 1-foot soil samples were again analyzed for the full sampling suite of VOCs, TPH, Title 22 Metals, PAHs, and PCBs, while the 5-foot samples were analyzed for the abbreviated suite of VOCs, TPH, and Title 22 Metals. The soil vapor probes were installed in approximately every other proposed soil boring. Boring logs showing soil vapor probe construction details are provided in Attachment A.

Following the installation, the probes were allowed to equilibrate prior to sample collection on October 21, 2021. The soil vapor samples (16 samples in total plus 1 duplicate sample) were analyzed for VOCs plus oxygenates using USEPA Method TO-15.

RESULTS

The following sections summarize the results of the investigation activities conducted by HMC.

Soil Results

Soil samples were analyzed for VOCs, TPH, Title 22 Metals, PAHs, and PCBs as these compounds are identified as present in the top 0 to 10 feet of the Site in the Final Site Characterization Report (Shaw, 2006) and the LUC.

This section provides a summary of results for each type of analyte. A summary of soil analytical results is also presented in Tables 1A and 1B.

- VOCs were detected in one sample (G3-03; Table 1B) in soil, consisting of three analytes: 1,1-dichloroethane (1,1-DCA), 1,2-dichloroethane (1,2-DCA), and 1,1,1-Trichloroethane (1,1,1-TCA). VOCs were not identified in shallow soils in the Final Site Characterization Report (Shaw, 2006), so results were compared to screening levels presented in DTSC Human Health Risk Assessment (HHRA) Note 3. All VOC detections present at the Site are below the recommended commercial/industrial human health screening levels.
- TPH was detected in twenty-five (25) samples (Table 1B) in soil. TPH detections were predominantly motor oil range (TPHmo) and diesel range (TPHd). TPH was not identified in shallow soils in the Final Site Characterization Report (Shaw, 2006), so results were compared

to screening levels presented in the Remediation Guidance for Petroleum Impacted Sites (USEPA, 1996). All detections present at the Site are below the recommended screening levels of 1,000 mg/kg TPHd and 10,000 mg/kg TPHmo.

- Metals were detected across the Site (Table 1A). The Final Site Characterization Report (Shaw, 2006) identified four Title 22 Metals as chemicals of concern, we will discuss each of the following:
 - Arsenic was detected in one soil sample (H3-03) at a concentration of 16 mg/kg (Table 1A). This concentration is consistent with the presence of arsenic in shallow soils in the Final Site Characterization Report (Shaw, 2006) and is well below the arsenic RCRA hazardous waste screening level of 500 mg/kg.
 - Chromium was detected in all soil samples at the Site, with concentrations ranging from 4.5 to 2,100 mg/kg (Table 1A). These results are consistent with the presence of chromium in shallow soils in the Final Site Characterization Report (Shaw, 2006) and are below the chromium federal Resource Conservation and Recovery Act (RCRA) hazardous waste screening level of 2,500 mg/kg. Soil samples with Total Threshold Limit Concentrations (TTLCs) higher than 50 mg/kg were analyzed for solubility (soluble threshold limit concentration [STLC] and toxicity characteristic leaching procedure [TCLP]) and no soluble chromium was detected at the Site.
 - Lead was detected in thirty-eight samples in soil at concentrations ranging from 3.8 to 730 mg/kg (Table 1A). These results are consistent with the presence of lead in shallow soils in the Final Site Characterization Report (Shaw, 2006) and are below the lead RCRA hazardous waste screening level of 1,000 mg/kg. Soil samples with total concentrations greater than 50 mg/kg were analyzed for solubility (WET and TCLP); soluble lead was detected at the Site at concentrations ranging from 1.2 to 22 milligrams per liter (mg/L). Soils found to be impacted with soluble lead concentrations greater than 5.0 mg/L will need to be managed as California non-RCRA hazardous waste during future soil management activities. Based on these concentrations, large-scale soil moving activities will likely also need to be monitored using x-ray fluorescence (XRF) devices, allowing for soils identified as containing lead with TTLCs higher than 50 mg/kg to be stockpiled and analyzed for soluble lead concentrations. Plate 2 illustrates the locations of soluble lead exceedances at the Site.
 - Mercury was detected in three samples (D1-03, D2-01, and E1-01) in soil at concentrations ranging from 0.13 to 0.32 mg/kg. These results are consistent with the Final Site Characterization Report (Shaw, 2006), where concentrations ranged from 0.16 to 0.35 mg/kg in shallow soils, and the results are below the mercury RCRA hazardous waste screening level of 20 mg/kg.

- PCB-1260 was detected in three samples (D1-01, H2-01, and I3-01; Table 1B) in soil. These results are consistent with the Final Site Characterization Report (Shaw, 2006) that found detections of PCB-1260 and PCB-1254 within shallow soils at the Site, and the results are below the PCB RCRA hazardous waste screening level of 50,000 µg/kg.
- PAHs were detected in four (4) samples (B1-01, B2-01, F3-01, and G3-03; Table 1B) in soil. These PAHs include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)-perylene, benzo(a)pyrene, chrysene, dibenzo(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)-pyrene, and pyrene. These results are consistent with the Final Site Characterization Report (Shaw, 2006) that found detections of 17 PAHs within the top 5 feet of soil at the Site. None of these compounds have an associated hazardous waste screening level.

Complete soil laboratory analytical reports and supporting chain-of-custody documentation are provided in Attachment B.

Soil Vapor Results

A summary of soil vapor analytical results is presented in Table 2. The laboratory analytical reports and supporting chain-of-custody documentation are provided in Attachment B.

The analytical results from the 17 soil vapor samples (16 soil vapor probes plus 1 duplicate sample) showed the presence of 18 different constituents. Fifteen (15) of the 18 detected constituents have soil vapor concentrations below their associated screening values, with no further action needed. Recommended screening levels for each analyte were determined according to the 2019 (Revision 2) San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) for commercial / industrial soil gas (Table 2).

Three (3) constituents (1,1-DCA, 1,2-DCA, and tetrachloroethene [PCE]) were found to exceed their recommended 2019 screening levels within soil gas.

- 1,1-DCA was only detected in sample G3, with a concentration of 3,900 micrograms per cubic meter (µg/m³). This exceeded the ESL of 260 µg/m³ and is consistent with 1,1-DCA detected in the co-located soil sample.
- Similarly, 1,2-DCA was only detected in sample G3, with a concentration of 220 µg/m³. This exceeded the ESL of 16 µg/m³ and is consistent with 1,2-DCA detected in the co-located soil sample.
- PCE concentrations exceeded the ESL of 67 µg/m³ in 4 of the 17 samples (A3, G1, H2, and the duplicate sample). The maximum value of 320 µg/m³ was observed in sample H2. PCE was not detected in shallow soils at the Site.

Plate 3 illustrates the locations with soil vapor exceedances at the Site. The concentrations reported are above the conservative vapor intrusion screening levels and suggest that some form of vapor mitigation measure, like a vapor barrier, may be necessary at the Site.

DISCUSSION

The data that was obtained as part of this investigation can be summarized as follows:

- Soil sampling confirms historic investigations, with VOCs, TPH, Title 22 Metals, PAHs, and PCBs confirmed to be present in shallow soils at the Site.
- VOCs detections in shallow soils are present below their recommended screening levels.
- TPH detections in shallow soils are present below their recommended screening levels.
- The presence of arsenic in shallow soils is consistent with the Final Site Characterization Report (Shaw, 2006) and the Land Use Covenant.
- The presence of chromium in shallow soils is consistent with the Final Site Characterization Report (Shaw, 2006) and the Land Use Covenant.
- The presence of total lead (TTL) in shallow soils is consistent with the Final Site Characterization Report (Shaw, 2006) and the Land Use Covenant. However, exceedances of soluble lead (STL) will require some soils to be managed as non-RCRA hazardous waste during future soil management activities.
- The presence of mercury in shallow soils is consistent with the Final Site Characterization Report (Shaw, 2006) and the Land Use Covenant.
- The presence of PCB-1260 in shallow soils is consistent with the Final Site Characterization Report (Shaw, 2006) and the Land Use Covenant.
- The presence of PAHs in shallow soils is consistent with the Final Site Characterization Report (Shaw, 2006) and the Land Use Covenant.
- Three (3) constituents (1,1-DCA, 1,2-DCA, and PCE) were detected in soil vapor at locations A3, G1, G3, and H2 at concentrations that exceeded screening levels. The concentrations reported are above conservative vapor intrusion screening levels and suggest that some form of vapor mitigation measure, like a vapor barrier may be necessary for future buildings at the Site.

CONCLUSIONS

Based on the information obtained as part of this investigation, the following conclusions have been made by HMC:

- Elevated concentrations of soluble lead were found in select soil samples that would classify that soil as non-RCRA hazardous waste in the State of California. Such soil should be removed and disposed off-site prior to mass grading efforts at the Site; and
- Elevated concentrations of VOCs were found in shallow soil gas above screening levels indicating the potential for a vapor intrusion condition to be present.

RECOMMENDATIONS

Based on the conclusions of this report, the following recommendations are offered for your consideration:

- Grading and development of the Site should proceed under the approved SMP after notification is given to DTSC as required. The areas with elevated concentrations of soluble lead should be removed and disposed of off-site in advance of grading proceeding at the Site. During grading, we would recommend that a field XRF unit be used to monitor the potential for additional locations to contain lead that may be encountered. If elevated concentrations of lead are encountered, that soil should be segregated and analyzed for the soluble fraction to assess whether that soil can be used as fill or must be removed from the Site. As part of the grading efforts, AQMD Rules 1166 (VOCs) and 1466 (Metals) should be followed.
- Given the concentrations of VOCs present in soil gas, a vapor mitigation system should be designed and installed under the future buildings.

We thank you for the opportunity to be of service. If you have any questions, comments or require additional information, please feel free to contact me at your convenience.

Very truly yours,
Hazard Management Consulting Inc.

Mark Cousineau, NREP
Principal

Notes:

Units: mg/kg = milligrams per kilogram, ug/kg = micrograms per kilogram, mg/L = milligrams per liter

ND<1.0 = not detected at or above the indicated reporting limit

This table is a summary of analytes detected in soil only. For a complete list of analytes, refer to the laboratory analytical reports

TTLC = Total Threshold Limit Concentration

STLC = Soluble Threshold Limit Concentration

TCLP = Toxicity Characteristic Leaching Procedure

Table 1B
Summary of Soil Analytical Results - Other Detections

Notes:
Units: mg/kg = milligrams per kilogram, ug/kg = micrograms per kilogram
ND<1.0 = not detected at or above the indicated reporting limit

Qualifier definitions:
D-03 = The result for the hydrocarbon range is due to the presence of a single analyte peak(s) in the quantitation range. It does not resemble the requested pattern.
D-06 = The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
R-07 = Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

Notes:

Results in micrograms per cubic meter (µg/m³)

Screening levels from the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs) for Commercial/Industrial Soil Gas (2019, Revision 2)

 = Concentration exceeds the associated screening value.

ND< = Analyte not detected at or above the indicated reporting limit.

This table presents a summary of analytes detected in soil vapor. For a complete list of analytes, refer to the laboratory analytical report.

Notes and Definitions

- S-GC Surrogate recovery outside of established control limits. The data was accepted based on valid recovery of the remaining surrogate(s).
- R-07 Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.
- QM-05 The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
- D-06 The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

- Leaking/Damaged
- Other:

▪ **CUSTODY SEALS**

- None
- Not Intact

▪ **TEMPERATURE (Temp criteria ≤ 6°C)**

- Cooler/Sample Temp(s)
- Temperature Blank(s)

▪ **CHAIN OF CUSTODY (COC)**

Not relinquished by client; No date/time relinquished

- Incomplete information provided
- COC not received – notify PM

▪ **CONTAINERS**

- Leaking Broken
- Extra Missing

▪ **LABELS**

- Not the same sample ID / info as on the COC
- Incomplete Information
- Markings/Info illegible

▪ **SAMPLES**

- Samples **NOT RECEIVED** but listed on COC
- Samples received but **NOT LISTED** on COC
- Logged based on Label Information and not COC
- Logged according to Work Plan and not COC
- Logged in, **ON HOLD** until further notice
- Insufficient quantities for analysis
- Improper container used

- Mislabeled as to tests, preservatives, etc.
- Holding time expired – list sample ID and test
- Not preserved/Improper preservative used
- Without Labels, no information on containers
- VOA vial(s) containing headspace >6mm
- Other

Project Manager notified of sample non-conformance(s) Yes No

All samples accepted for processing and distributing to laboratory(ies) Yes No

For samples not accepted due to non-conformance, specify each specific sample ID being rejected in the comments section below:

WORK ORDER

T213165

Client: Equipoise Corporation

Project Manager: Mike Jaroudi

Project: HMC Arrowhead

Project Number: [none]

Report To:

Equipoise Corporation
 Melissa Robinson
 1311 Calle Batido, Suite 260
 San Clemente, CA 92673

Date Due: 10/26/21 17:00 (5 day TAT)

Received By: Dave Berner

Date Received: 10/19/21 13:42

Logged In By: Jennifer Berger

Date Logged In: 10/19/21 16:05

Samples Received at: **2.1°C**
 Custody Seals No Received On Ice Yes
 Containers Intact Yes
 COC/Labels Agree Yes
 Preservation Confirmed No

Equipoise Corporation

Project: HMC Arrowhead

1311 Calle Batido, Suite 260

Project Number: [none]

Reported:

San Clemente CA, 92673

Project Manager: Melissa Robinson

10/27/21 16:24

Notes and Definitions

- S-GC Surrogate recovery outside of established control limits. The data was accepted based on valid recovery of the remaining surrogate(s).
- R-07 Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.
- QM-05 The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
- D-06 The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
- D-03 The result for the hydrocarbon range is due to the presence of a single analyte peak(s) in the quantitation range. It does not resemble the requested pattern.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

DETECTIONS SUMMARY

Sample ID: A1 **Laboratory ID:** T213187-01

Analyte	Reporting		Units	Method	Notes
	Result	Limit			
Tetrachloroethene	33	6.9	ug/m ³ Air	TO-15	
Toluene	120	3.8	ug/m ³ Air	TO-15	
m,p-Xylene	18	8.8	ug/m ³ Air	TO-15	
o-Xylene	5.2	4.4	ug/m ³ Air	TO-15	

Sample ID: A3 **Laboratory ID:** T213187-02

Analyte	Reporting		Units	Method	Notes
	Result	Limit			
Acetone	31	12	ug/m ³ Air	TO-15	
Tetrachloroethene	78	6.9	ug/m ³ Air	TO-15	
Trichlorofluoromethane	16	5.7	ug/m ³ Air	TO-15	
Toluene	13	3.8	ug/m ³ Air	TO-15	
m,p-Xylene	14	8.8	ug/m ³ Air	TO-15	

Sample ID: B2 **Laboratory ID:** T213187-03

Analyte	Reporting		Units	Method	Notes
	Result	Limit			
Acetone	16	12	ug/m ³ Air	TO-15	
Tetrachloroethene	47	6.9	ug/m ³ Air	TO-15	
Trichloroethene	9.6	5.5	ug/m ³ Air	TO-15	
Toluene	13	3.8	ug/m ³ Air	TO-15	
m,p-Xylene	9.5	8.8	ug/m ³ Air	TO-15	

Sample ID: C1 **Laboratory ID:** T213187-04

Analyte	Reporting		Units	Method	Notes
	Result	Limit			
Acetone	18	12	ug/m ³ Air	TO-15	
Carbon Disulfide	3.8	3.2	ug/m ³ Air	TO-15	
Toluene	13	3.8	ug/m ³ Air	TO-15

Subject: Re: Final Report and Invoices for HMC Arrowhead (T213165 and T213166)

Hello Joan,

Based on the concentrations present in these lab reports, we have 15 soil samples that need to be reanalyzed for STLCL/TCLP metals solubility (for hazardous waste characterization) on a rushed TAT (3-days if possible).

The following list calls out the samples/metals in question.

- C3-1 has Lead at 82 ppm
- E3-1 has Lead at 66 ppm
- F1-1 has Lead at 250 ppm
- G1-1 has Lead at 50 ppm
- H2-1 has Lead at 110 ppm, Chromium at 230 ppm, and Nickel at 290 ppm
- H3-1 has Chromium at 51 ppm
- I2-1 has Lead at 540 ppm
- I3-1 has Lead at 580 ppm and Chromium at 170 ppm
- J1-1 has Lead at 670 ppm
- J2-1 has Lead at 57 ppm
- K1-1 has Lead at 61 ppm

- B1-3 has Chromium at 170 ppm
- B3-3 has Chromium at 110 ppm
- G2-3 has Lead at 51 ppm, and
- G3-3 has Chromium at 2100ppm, Copper at 760 ppm, Lead at 730 ppm, and Nickel at 1400 ppm.

Please let me know if you have any questions.

-Melissa

- Custody seals intact on cooler/sample Yes No* N/A
- Sample containers intact Yes No*
- Sample labels match Chain of Custody IDs Yes No*
- Total number of containers received match COC Yes No*
- Proper containers received for analyses requested on COC Yes No*
- Proper preservative indicated on COC/containers for analyses requested Yes No* N/A
- Complete shipment received in good condition with correct temperatures, containers, labels, volumes preservatives and within method specified holding times Yes No*

* Complete Non-Conformance Receiving Sheet if checked Cooler/Sample Review - Initials and date: JB 10/19/21

Comments: Sample #50 ("C3-10-20211019") was not received with a container. Sample ID's and ^{as 10/19/21} sampled times for sample #34 and #49 were swapped on the COC and container, as clarified by the client.

SAMPLE NON-CONFORMANCE SHEET

Batch/Work Order # 7213165

▪ **COOLERS**

- Not Received (received COC only)
- Leaking/Damaged
- Other:

▪ **CUSTODY SEALS**

- None
- Not Intact

▪ **TEMPERATURE (Temp criteria $\leq 6^{\circ}\text{C}$)**

- Cooler/Sample Temp(s)
- Temperature Blank(s)

▪ **CHAIN OF CUSTODY (COC)**

Not relinquished by client; No date/time relinquished

- Incomplete information provided
- COC not received – notify PM

▪ **CONTAINERS**

- Leaking Broken
- Extra Missing

▪ **LABELS**

- Not the same sample ID / info as on the COC
- Incomplete Information
- Markings/Info illegible

▪ **SAMPLES**

- Samples **NOT RECEIVED** but listed on COC
- Samples received but **NOT LISTED** on COC
- Logged based on Label Information and not COC
- Logged according to Work Plan and not COC
- Logged in, **ON HOLD** until further notice
- Insufficient quantities for analysis
- Improper container used

- Mislabeled as to tests, preservatives, etc.
- Holding time expired – list sample ID and test
- Not preserved/Improper preservative used
- Without Labels, no information on containers
- VOA vial(s) containing headspace >6mm
- Other

Project Manager notified of sample non-conformance(s) Yes No

All samples accepted for processing and distributing to laboratory(ies) Yes No

For samples not accepted due to non-conformance, specify each specific sample ID being rejected in the comments section below:

Subject: Re: Final Report and Invoices for HMC Arrowhead (T213165 and T213166)

Hello Joan,

Based on the concentrations present in these lab reports, we have 15 soil samples that need to be reanalyzed for STL/TCLP metals solubility (for hazardous waste characterization) on a rushed TAT (3-days if possible).

The following list calls out the samples/metals in question.

- C3-1 has Lead at 82 ppm
- E3-1 has Lead at 66 ppm
- F1-1 has Lead at 250 ppm
- G1-1 has Lead at 50 ppm
- H2-1 has Lead at 110 ppm, Chromium at 230 ppm, and Nickel at 290 ppm
- H3-1 has Chromium at 51 ppm
- I2-1 has Lead at 540 ppm
- I3-1 has Lead at 580 ppm and Chromium at 170 ppm
- J1-1 has Lead at 670 ppm
- J2-1 has Lead at 57 ppm
- K1-1 has Lead at 61 ppm

- B1-3 has Chromium at 170 ppm
- B3-3 has Chromium at 110 ppm
- G2-3 has Lead at 51 ppm, and
- G3-3 has Chromium at 2100ppm, Copper at 760 ppm, Lead at 730 ppm, and Nickel at 1400 ppm.

Please let me know if you have any questions.

-Melissa
